

Configure ImageDataGenerator Class

ImageDataGenerator class is instantiated and the configuration for the types of data augmentation

There are five main types of data augmentation techniques for image data; specifically:

Image shifts via the width_shift_range and height_shift_range arguments.

The image flips via the horizontal_flip and vertical_flip arguments.

Image rotations via the rotation_range argument

Image brightness via the brightness_range argument.

Image zoom via the zoom_range argument.

An instance of the ImageDataGenerator class can be constructed for train and test.

Image Data Agumentation

```
#setting parameter for Image Data agumentation to the traing data  
train_datagen = ImageDataGenerator(rescale=1./255,shear_range=0.2,zoom_range=0.2,horizontal_flip=True)  
#Image Data agumentation to the testing data  
test_datagen=ImageDataGenerator(rescale=1./255)
```
